No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                       1 ATQNKALPENVKYGIVLDAG.......NLTNMIPAEQPLSTPLSHST 440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4

Sequence 4, Application US/09908510A

Patent No. 6759214

Patent No. 6759214

GENERAL INFORMATION:

APPLICANT: Chadwick, Brian Paul

APPLICANT: Chadwick, Brian Maxia

TITLE OF INVENTION: METHODS AND COMPOSITIONS RELATING TO CD39-LIKE POLYPEPTIDES AND

TITLE OF INVENTION: ACIDS

TITLE OF INVENTION: ACIDS

FILE REFERENCE: 20110/36120B

CURRENT APPLICATION NUMBER: 108/09/908,510A

CURRENT PILING DATE: 2001-07-13

PRIOR APPLICATION NUMBER: 09/240,639

FRIOR APPLICATION NUMBER: 09/240,639

NUMBER OF SEQ ID NOS: 32

SOFTWARE: PATENT VERSION 3.1

SEQ ID NO 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
apyrase (EC 3.6.1.5) precursor - potato
N;Alternate names: adenylpyrophosphatase; ATP-diphosphohydrolase
C;Species: Solanum tuberosum (potato)
C;Date: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 09-Jul-2004
C;Accession: JC4616; PC4147
R;Handa, M; Guidotti, G.
Biochban: Biochban and clouing of a soluble ATP-diphosphohydrolase (Apyrase) from pot A;Reference number: JC4616; MUID:96158985; PMID:8579614
A;Accession: JC4616
A;Molecule type: mRNA
A;Residues: 1-454 *HAN>

Biol. Chem. 275:2057-2062(2000).

-I. FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could als be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-I. CATALYTIC ACTIVITY: ATP + 2 H(2)O = AMP + 2 phosphate.

-I. COPACTOR: Requires calcoium and magnesium.

-I. SUBCNITY: Homodimer; disulfide linked (By similarity).

-I. SUBCELLOLAR LOCATOR: Integral membrane protein (Potential).

Biol. Chem. 271:3316-33122(1996).

-!- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-!- GATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-!- CORACTOR: Requires calcium and magnesium (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-!- TISSUE SPECIFICITY: Highest expression found in vascular endochhelium, smooth muscle, spleen and lung.

-!- PTM: Cleaved into two polypeptides that seem to stay together by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Distribution, cloning, and characterization of porcine nucleoside
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-OCT-2001 (Rel. 40, Created)

                                                                                                  cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nucleotides to regulate purinergic neurotransmission. Could a be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-!- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.
-!- COFACTOR: Requires calcium and magnesium.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- SUMILARITY: Belongs to the GDA1 / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=97115858; PubMed=8955160; DOI=10.1074/jbc.271.51.33116; Kaczmarek E., Koziak K., Sevigny J., Slegel J.B., Anrather J., Beaudoin A.R., Bach F.H., Robson S.C.; Illustration and characterization of CD39/vascular ATP

                                                                                                                                                                                                                          J. BIOJ. Chem. 272:23645-23652(1997).

-! FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well (By similarity).

-! CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-! COPACTOR: Requires calcium and magnesium (By similarity).

-! SUBUNIT: Homodimer; disulfide-linked (Probable).

-! SUBCELGUIAR LOCATION: Integral membrane protein (Potential).

-! FTM: N-glycosylated.
